

**NOTE**  
 The installer must ensure the incoming cold mains has all the required safety devices fitted. A pressure relief valve must be fitted into the domestic hot water circuit. A DHW expansion vessel is optional.

**INSTALLATION NOTES**

Observe the DHW maximum working pressure and install correct rating pressure relief valves accordingly. These relief valves do not replace the 6- 8bar valve supplied.  
 Install a drain valve to the lowest point(s) of the domestic hot water pipework.  
 We recommend pipe insulation throughout the pipework as it will improve the DHW and the overall system thermal performance.

**IMPORTANT**

The domestic hot water system must have thermostatic flow temperature control. If omitted, the water can be very hot and extra care must be taken to avoid injury.
